# What Our Customers Say About Our Service and Goods

GENTLEMEN—In answer to yours of recent date, asking if the supplies that you shipped to me were O. K. and were satisfactory.

Yes, they did and they were very satisfactory and I must thank you for the advice given me on what sizes of pipe to buy, as I am well pleased that I took your advice.

J. H. SWARTZ,  
East Stroudsburg, Pa.

GENTLEMEN—I received my shipment of plumbing supplies O. K. Everything seems to be alright and it came through in good shape due to the fact that it was well crated.

Thank you very much for your promptness in handling my order.

Yours very truly,  
HERBERT A. RICE,  
Barre, Mass.

## This GUARANTEE Covers Every Sale

We guarantee all articles herein listed both as to materials and workmanship. Each and every item must be exactly as represented or the sale is incomplete. You must be satisfied. If, on receipt and examination, you should find any articles that are defective, or in any way not exactly as represented by us, we guarantee to replace the same at our expense or refund your money, if you so desire, on receipt of such goods returned to us collect.

SMYTH-DESPARD CO.,  
By D. DeW. Smyth, Pres.  
Utica, N. Y.

GENTLEMEN—The two orders of plumbing supplies I received from you came prepaid and in good order, and cost much less than if I had bought locally.

Yours truly,  
H. A. Hayes,  
Vineland, New Jersey.

GENTLEMEN — Material arrived O. K. I am very much pleased with the same. Thank you for your prompt shipment and I will send order for more supplies in a few days.

Yours truly,  
J. H. Hutchinson,  
Auburn, New Jersey.

GENTLEMEN—I wish to inform you that the furnace was received in good condition and is now installed and is giving perfect satisfaction. I must say that it is a "Jewell" as well as a "KracKerjack." I am very much pleased with it. Several persons have asked me about it and I am glad to recommend you as you have treated us fair.

I remain,  
MRS. S. OBERLE,  
1114 Gorsuch Avenue,  
Baltimore, Maryland.

GENTLEMEN—KracKerjack Furnace I got from you is doing all you claim for it. Am well pleased with it.

Very respectfully,  
E. G. SWARTZ,  
Mill City, Pa.

GENTLEMEN—Furnace arrived all O. K. Friday night and this morning another fellow and myself started to set up the furnace and tonight we had a fire in it. We finished it complete in just nine hours. Everything fitting fine and it works alright. I am very much pleased with it.

Very truly, yours,  
JAMES W. WEST,  
Middleburg, N. Y..

GENTLEMEN—The laundry tray and porcelain sink purchased from you, I am well pleased with both. I ordered them one week and they came the next.

Yours,  
IDA COOK,  
Dover, Delaware.

# Wholesale Prices to Retail Buyers

## OUR POLICY AND SERVICE

1. Our Mail Order Department is the outgrowth of an old established business of which it forms a part. You take absolutely no risk in dealing with us. Your **Bank, Bradstreet's or Dun's** will assure you of that. Our service has back of it Twenty years of experience in equipping mills, factories and creameries with mechanical and sanitary supplies. Our organization is fitted to serve you promptly, satisfactorily and at the **Lowest Possible Prices**, consistent with high quality. Our experience is at your service. Consult it freely.

2. As specialists in mechanical and sanitary supplies, we have selected and listed in this catalog those **Essential Supplies** only that are particularly needed in the equipment of the **Modern Home** and the **Modern Farm**. Beyond these, we carry a large general stock of mechanical supplies and solicit your inquiries on your mechanical requirements whether for the **Farm, Home, Mill or Creamery**. We **know** the goods we offer are of the **highest quality**. We know our prices are right. We know we can save you money.

3. Our system provides for: **Direct Sales; No Middlemen**. One price to everybody; **Cash with Order**. We prepay Freight on all orders received, amounting to \$10.00 or more, to your railroad station in any of the following states: **New York, Pennsylvania, New Jersey, Delaware, Maryland, Ohio, Massachusetts, Rhode Island, Connecticut, Maine, Vermont and New Hampshire**. Elsewhere we will equalize freights correspondingly. By our mail order sales system, we cut our selling costs to a minimum. By requiring cash with order, we avoid discriminations and a costly credit system. Both Savings are passed on to you in price.

4. Our prices are protected against decline in this manner; namely, that should reductions occur, you will immediately receive the benefit of such reduction and any difference between the market and catalogue prices will be remitted to you on orders received subsequent to such change. As is customary, we reserve the right to protect ourselves against sudden and exceptional advances, through the cancellation of order and the return of money, when, under extraordinary conditions, the transaction involves serious loss. However, our intent and practice is to absorb any minor market advances ourselves.

5. We welcome comparison of our prices with those of others. Remember in this connection our **Free Delivery System**. Subject to the conditions outlined above, we Prepay Freight. Remember, too, that all commodities offered are of the very highest grade procurable. Our guarantee has back of it not only our full financial worth but also twenty years' experience in the manufacture and sale of mechanical and sanitary supplies and a reputation gained through twenty years of fair and honest dealings with our customers.

6. We invite inspection of our stocks. It will give us pleasure to welcome you and your friends in our store. We will spare no effort, serving you, to win and to retain your confidence.

# The Pipeless Furnace

The Krackerjack Furnace is designed primarily for the Rural Home, Church or Schoolhouse. For best results, it should be installed in houses that are fairly compact, and where rooms are so connected as to allow a fairly free circulation of air. Unless there is an open stairwell, the use of ceiling registers is recommended for heating the second floor. The wonderful efficiency of the Krackerjack Furnace lies quite as much in the rapidity with which the cold air is withdrawn from the rooms as in the force with which the heated air is expelled to replace it. This Furnace represents the best heat engineering and practice. It is so thoroughly substantial, it will last a lifetime. It carries unusual weight, size for size. No expense has been spared in materials and workmanship. All parts are so simply constructed that anyone, who can use a saw, a pair of tinners' snips and a screw driver, can readily install it. No high priced labor is required. We furnish full instructions for installing. We challenge comparison with any other furnace on the American market.

## Exclusive Features of the Krackerjack Furnace

1. A Cast Iron Radiator. It will last forever.
2. An extra high combustion chamber.
3. A grate of triangular crusher pattern, extra heavy construction.
4. A straight sided Deep Corrugated Fire Pot.
5. Every section is provided with extra deep cupped joints, ground to an exact fit.
6. Perfect Insulation of hot air chamber.
7. Heavy galvanized iron outer shell or casing.
8. Extra large feed doors.
9. An extra woodburning grate free, together with poker, check draft, water pan, shaker handle, check and regulating dial, chain and pulleys.

We feature the  Furnace in the sure knowledge that it has no equal.

## Pipe and Fittings at Wholesale Prices

On this and the following pages we illustrate and show prices of standard articles for steam and water jobs. These prices (delivery paid) speak for themselves. The quality of the products is absolutely high grade and is backed by our unconditional guarantee.

Use Black Pipe and Fittings for steam and hot water heating systems or air pipe lines.

Use Galvanized Pipe and Fittings for supply and waste pipes on plumbing systems, drinking water pipe lines, etc.

Prices quoted are for random lengths 18 to 20 feet threaded both ends, coupling on one end. For pipe cut to specified lengths furnished threaded both ends only, no couplings, see extra charge for threading each thread.

### Price \$78.48 Complete

Price, as quoted, is for plumbing fixtures as shown and includes one Sunapee Lavatory, one Seneca Bath Tub in either 4', 4½' or 5' lengths, in either 26" or 30" widths and our Perfection Closet Combination with five-year guaranteed mahogany finished seat. A modern and attractive bathroom, moderately priced.

# Bathroom and Kitchen Equipment

## FOREWORD

Modern Plumbing uses wrought iron and cast iron pipe only. Lead pipe and solder joints have, for the most part, been discarded. As a result any man, handy with tools, can install a good, workable sanitary system.

2. In selecting our line of plumbing materials great care has been exercised to select only the best. Our enameled and vitreous wares are of the very highest type and finish. Our brass goods represent the highest type castings and tubings, heavy, well nickel plated, carefully finished, guaranteed in every respect. Plumbing Fixtures are bought for a lifetime. Only the best are good enough for your home.

3. In comparing prices note that our prices include the cost of delivery, which in this class of materials is a large item.

4. **Important**—in many cities plumbing ordinances exist and where these exist, it is imperative that they should be consulted and complied with in detail. Such ordinances exist for the protection of the health of the individual and the community.

### 5. General remarks:

- a. Select material only of sanitary design and of the best quality.
- b. Use cast iron pipe drains within the building.
- c. Allow ample pitch in all waste pipes.
- d. See that all soil pipe joints are thoroughly caulked—they must be absolutely watertight and gastight.
- e. Any ventilating used should connect with main stack which in itself should be carried well above the roof and be so located as to avoid any possible contamination of the air in sleeping chambers.
- f. In laying out plans for water pipes, arrange so that the whole system can be thoroughly drained. Avoid all possibility of pockets and pitch all pipe.
- g. Trap the whole system at the point where the drainage leaves the cellar.
- h. In rural installations and in the absence of a sewerage system, care must be used in the location and installation of cesspools. In particular, be absolutely sure that such system is so located and installed as to avoid any possible contamination of water supply. This is most important. If interested in the installation of a septic tank write your State Agricultural Department for plans and specifications.
- i. When in doubt consult us. We shall be pleased to help you with your problems.

## PERFECTION CLOSET

Absolutely the best closet value. Light in weight, yet practically unbreakable. Tank is made of a dense impervious mineral, watertight product of great strength and durability; not affected by any water conditions. Top may be removed and dropped without fear of breaking. Tank is in white celluloid enamel of beautiful finish. First grade flushing mechanism and white china lever. Bowl of white china, washdown pattern, superior mahogany finished seat and cover with solid brass hinges heavily nickel plated. Nickel plated brass slip joint elbow from tank to bowl. Supply pipe to floor threaded for iron pipe connections with flange. Nickel plated floor screws and washers.

A combination of chemicals, absolutely harmless to plumbing or plumbing fixtures, that will remove stoppages in drain pipes, whether caused by hair, lint, grease or vegetable matter. Frequent use, insures sanitary free flowing drain pipes. A trouble saver.

Packed in one-pound cans with complete directions for use.

Price. . . . . \$ .31

### Graphite Pipe Joint Cement

A Cement compounded of graphite and pure oil that will make threaded pipe joints that will positively hold tight and has the added advantage of allowing joints to be taken apart years after installation. Net weight one pound. Full directions for use on each can.

Price. . . . . \$ .42

# Utility Engines, Pumps, and Equipment

## The KRACKERJACK Kerosene Engines

Efficient, Dependable, Economical

Hitch these Jobs to a Krackerjack Engine

1 3/4 H.P.—Designed especially for running churn, separator, washing machine, grindstone, fanning mill, and to pump water either with our direct connected jack or with belted jack. Use it with six inch burr feed mill or drag saw.

3 H.P.—Will operate your electric light plant, 22-inch circular saw or six inch grinder, milking machine, small air compressors, two hole corn sheller, fanning mill, bone and vegetable cutter, 5-inch cane mill, 10-inch saw rig, concrete mixers, lathes, drill presses, hoists, winches. Used as starters for Diesel type engines. Is especially adapted for line shaft work.

5 H.P.—Big enough for most jobs. Will pull 8-inch corn cob crusher. Used for cutting wood on horse drawn truck. Will drive a 26-inch saw blade. Used with spraying machines, hay stacker, hay carrier, grain elevator, hoists, run a 3000 watt dynamo. Has been adopted as standard equipment by many concrete mixer manufacturers.

7 H.P.—Will pull a 30-inch cordwood saw blade. Is used as standard equipment by many hay press manufacturers. Good for 12-inch silage cutter, 10-inch corn cob crusher or 12-inch burr mill.

12 H.P.—Will run an 18-inch burr mill, 17-inch ensilage cutter with blower, 20-inch cutter with carrier, four and six roll husker and shredder, 16x18 or 17x22 hay baler, six hole corn sheller, 36 or 38-inch cut off saw, 22-inch rip saw, threshing machines with 22x36 or 15x30-inch cylinders. Operate rock crushers, handle 40-inch saw.

Krackerjack Throttling Governor Engines burn any available fuel.

Krackerjack Kerosene Engines waste no fuel, have no smoke in the exhaust. This complete combustion is due to the specially designed Throttling Governor Mixer used on all kerosene engines.

The Krackerjack Throttling Governor Kerosene Engine is as simple in operation as an ordinary gasoline engine. No complicated attachments nor high compression.

By means of the throttling governor the amount of fuel taken into the engines is throttled, just as it is with a steam engine. One explosion takes place in the cylinder to every two revolutions of the flywheels. This explosion is large or small, depending upon the power used and is controlled entirely by the governor. This means that the throttling governor engine maintains an even heat in the cylinder, as explosions are regular, regardless of the load that you are pulling.

The Krackerjack Mixer is connected by a short passage to the cylinder so there is no opportunity for Kerosene, or cheaper fuels to condense. A water valve is provided that enables water to be taken into cylinder where it is converted into steam. This steam destroys the carbon that may form in the cylinder.

There is a vast difference between "hit and miss" engines which operate on kerosene and Krackerjack "throttling governor" engines which permit the use of any of the higher priced or any of the lower priced fuels—just as desired.

# The **KRACKERJACK** Gasoline Engine

Efficient, Dependable, Troubleproof

There's no class of power requirement more exacting than the power demands of farming. Here all kinds of weather conditions are encountered. Varying services must be performed, varying loads carried and frequently the engine must be operated by persons with little mechanical knowledge or experience. It is to meet such conditions that the KrackerJack Gasoline Engine has been built and it is under such conditions it has proved its value.

The foremost engine designers agree that the Valve-in-the-head design, as employed in the KrackerJack, is the most satisfactory, practical and advantageous design. Valves are placed where they are accessible and in proper relation to the combustion chamber. The valves are made extra large so the cylinder can clear itself thoroughly and quickly. This is important, for unless the valves operate properly at high speed, the engine cannot develop its full capacity.

The cylinder, which is cast together with the base, is always in perfect alignment with crankshaft. This does away with any side wear on the piston or strain on the connecting rod. The cylinder is bored, reamed and burnished, which insures a perfect fit with the piston.

Every cam, every gear that is eliminated makes that engine just that much easier to run or handle. Two ordinary gears and push rods operate the entire engine and ignition system.

Every KrackerJack engine is tested ten hours on the testing blocks. After painting a special test is made to make sure engine is in perfect adjustment before shipment. KrackerJack Engines come to you trouble-proof, over-powered and ready to run.

## Myers Self-Oiling Bulldozer Power Pump

**Self-Oiling. Fully Enclosed.**  
**Back Geared 5 to 1.**  
**For General Service.**  
**100 Pound Pressure.**

This famous pump is a single cylinder, double-acting power pump for general service on Farms, Plantations, Country Estates, in Apartment Houses, Hotels, Mills, Factories, Railways, Tank Stations, or wherever from 500 to 9,000 gallons of water per hour are required against 100 lbs. pressure or 225 ft. elevation. This design has been brought out to meet the general needs of the trade for an efficient, durable pump of modern construction at a moderate price.

The power end consists of a one-piece casting which forms the base of the pump and oil reservoir, and in connection with a lid encloses all working parts, protecting them from dirt or injury, and securing safety of operation. This casting is completely machined at one setting for all bearings, the crosshead, cylinder head and shaft bearings, insuring alignment of all working parts. The pinion and gear are mounted between double bearings A—these bearings are renewable. Both gear and pinion are machine cut from the solid—the gear is cast iron and the pinion steel. An eccentric cast integral with the main gear operates the crosshead throughout a connecting rod which is adjustable for wear at the eccentric end, and is fitted with a renewable bronze bushing at the crosshead end. The crosshead is of large diameter running in a bored guide. From the oil reservoir in the base oil is carried by the main gear to the highest parts of the pump and by a system of channels distributed to all moving parts and returned again to the reservoir. This system of flood lubrication contributes quiet operation and long life, with a minimum of attention.

The cylinder, which is brass lined, is a one-piece casting, attached to the power end by heavy bolts. Large rubber valves on bronze grid seats are all located above the cylinder insuring priming. Suction and discharge valves are easily accessible for inspection and repair without disturbing pipe connections. Suction and discharge piping may be taken from either side.

As compared with older designs this pump has larger valves, more liberal and direct waterways, and a positive oiling system enabling it to be operated against a heavy pressure or at high speed, securing large volume and high efficiency.

**Maximum Capacity 500 gals. per hour at 70 R.P.M. Usual speed 60 to 65 R.P.M.**

### Heavy Windmill Set Length Force Pump

Strong, heavy duty combination hand and windmill set length force pump. Can be operated by hand, windmill or pump jack. Tapped in back for  $1\frac{1}{4}$ " pipe. Vent hole above cylinder to prevent freezing. Comes complete as pictured with 4 feet length between base of pump and cylinder. Will operate in well 30 feet deep. Under favorable conditions water can be drawn by suction a distance of 25 feet.

Cylinder should be within 15 feet or less of the water level. Best results are obtained when cylinder is below water level. Suction pipe should not touch bottom of well. It is advisable to attach strainer to end of suction pipe (or cylinder if at bottom).

Can be furnished with bolted spout faucet, in place of cock spout as shown.

Order enough  $1\frac{1}{4}$ " galvanized pipe to reach below water level.

SIZE OF CYLINDER	DIAMETER OF PIPE	STROKE	PRICE
No. 4.....3"x10"	$1\frac{1}{4}$ "	6"	\$ 11.47

If wanted with bolted spout faucet in place of cock spout add \$1.92 to the above price.

### Windmill Set Length Pump

Operates by hand, windmill or pump jack. A good strong pump for farm service. Six inch stroke. Comes complete as pictured with cylinder 4 feet below platform of pump. Operates efficiently in wells 30 ft. deep. Set screw cap to allow handle in any position. Krackerjack standard cylinder accurately bored and polished. Vent hole above cylinder to prevent freezing. When ordering pump, order enough  $1\frac{1}{4}$ " pipe to allow cylinder to reach below water line.

SIZE OF CYLINDER	DIAMETER OF PIPE	STROKE	PRICE
No. 4.....3"x10"	$1\frac{1}{4}$ "	6"	\$ 8.16

### Single Geared Clamp Jack

A strongly built substantial single geared Jack. Furnished with sub-base. Attaches readily to any pump—fastens firmly. Sub-base jack rests solidly on wide spreading base. Is equally efficient as platform, horizontal, overhead or wall jack. Used extensively for operating pumps with wells, sewers, fuel tanks, storage tanks, etc. Pitmans keep perfect alignment.

### Double Geared Jack

A strong, durable Jack. Main frame is of well proportioned substantial design. Clamps firmly and securely to any pump in upright position. Foot of pump gives solid support to pulley end of jack by distributing strain over four gears. Wear is reduced. Double gears produce a steady, even lift on the pump plunger, which prolongs the life of pump and jack, eliminating the side draft. Lift range 200 feet.

#### LIFTING CAPACITY

JACK GEAR RATIO	2" CYLINDER	STROKE	PULLEY	PRICE
Single Gear 4 to 1	125 to 150 ft.	5", $7\frac{1}{2}$ ", 10"	13"x2"	\$ 6.32
Double gear 4 to 1	150 to 200 ft.	5", $7\frac{1}{2}$ ", 10"	13"x2"	8.64

Speed for shallow wells 40 to 50 strokes per minute.

Speed for deep wells, 25 to 35 strokes per minute.

## KRACKERJACK Set Length Pumps

Strong, substantially made. Has hole just above cylinder to prevent freezing. Comes complete as pictured with pump rod pipe and cylinder. Set length has cylinder 4 feet below base of platform standard, connected with 1 1/4" pipe. Cap revolves and has set screw. When ordering this pump, order enough pipe so that cylinder can reach into well 3 feet below water line. Has 6" stroke. Diameter of cylinder 3"x10".

Price . . . . . \$ 6.96

## KRACKERJACK

### Pump Bracket

Attractive adjustable bracket that can be attached to an iron or enameled roll edge kitchen sink. Eliminates sloppy and very undesirable condition usually found where shelf or wooden rack is used to support pump.

Quickly clamps to sink with set screws. Rubber packing or leather should be placed between bracket and sink to prevent injury to enamel.

Price . . . . . \$ 1.20

## Hudson Automatic Bowls

An ample water supply for the dairy means increased milk production. Increased production will pay for installation of water system and leave a substantial profit at the end of from three to four months. After that, all extra profit is net.

The Hudson Bowl is the simplest, cleanest, most sanitary bowl on the market.

The Hudson Bowl is furnished for attachment to wood stanchions or steel stanchions of any design.

The Hudson Bowl will operate under any pressure.

The Hudson Bowl is so designed that supply can be piped from the side or from above or below with equal ease and economy.

The Hudson Bowl has no angles, grooves or corners. It is perfectly smooth.

The valve lever and valve are positive and cannot clog.

The bowl itself can be instantly detached, cleaned and replaced.

Price each. ....\$ 3.67

## Extra Heavy Cesspools

Size 12"x12". With 4" outlet. Complete with double grating.

# YOU NEED KRACKER-JACK

## Silk Fibre Roof Cement

*It has so many wonderful uses*

### Why KRACKER-JACK Cement is Better

Unlike most roof cements "KracKer-jack" Silk Fibre Roof Cement is made on a pure vegetable base—not on a coal tar base. This gives it a tough, elastic, rubber-like quality that makes it easy to handle and prevents it from melting and running in hot weather or becoming brittle and cracking in cold weather. It sticks—and it will stay stuck for an indefinite period. Roofs put on over 25 years ago (1898) are still in splendid condition and show no noticeable change except for the formation of a thin protective covering on the outside. How many roof cements can show such a record!

Let us tell you about this remarkable cement. It is the finest all around waterproofing material made for fixing a thousand and one places like leaky roofs, tanks, silos, joints, etc. It will stick stronger than glue or tar to tin, wood, metal, felt, slag, shingles or cement. And it will stay stuck, making a roof, tank or silo completely waterproof. It is so good, we give an unqualified guarantee of absolute satisfaction, or your money back—you to be the sole judge. You'll be mighty glad, once you give it a trial, that we introduced it to you. And you'll always thereafter, keep a drum handy.

"KracKerjack Cement" comes in both liquid and plastic form. The liquid form you paint on with a coarse brush or a broom. Put it on an old roof that has commenced to go to pieces and see the result. It will stop leaking, and the life of the roof will be continued for a long time. A coat over any kind of a paper or composition roof will give it a remarkably long life. Paint a leaky gutter and it will leak no more.

In the plastic form it is indispensable about a home or farm. You never know, after you get a can, how you ever got along without it. It's best handled with a small trowel, though a broad knife or flat stick will do. If the roof leaks around the chimney you can repair it permanently in no time. If winter comes on, and the weather gets in around the base-boards, you can stop it at once. If a watering trough leaks, plug the hole with a little cement and your troubles are over. Around buried sewer or water pipe joints, it works finely. If the silo leaks you can stop it easily. For ordinary work from 1 to 1½ gallons of the liquid cement will cover 100 square feet. Gravel or felt roofs take about three times as much.

"Can't be beat" for preventing leaks around chimneys, flashings, building walls, cornices, skylights, gutters, valleys, etc. Forms a joint between wood, metal or masonry that takes up the expansion and contraction caused by changing weather, and will absolutely stop leaks.

In liquid form just paint on with a brush or broom. Stops leaks in old roofs. Makes new roofs last a whole lot longer. Sticks to paper shingles, wood, tin, metal, felt, composition roofings, or any other material.

# Make your Old Roofs Like New -- At these Low Prices with **KRACKERJACK** Cement

TRADE MARK

Remember—we guarantee satisfaction—and you are the sole judge. If it doesn't do the work, you get your money back. Don't wait until the roof gives out and the ceilings are spoiled. Get a can each in liquid and plastic form and when the trouble starts you'll be ready. It may save many dollars in damage prevented. The cost is small and the cement absolutely will not deteriorate in the can or barrel. Don't delay. Order now. We guarantee your satisfaction.

**KRACKERJACK**  
TRADE MARK

**Our Guarantee:** We guarantee absolute satisfaction or money refunded without qualification—you to be sole judge. This is the fairest, broadest, most liberal guarantee that can be made in any product. It proves that this cement is right.

Mighty handy for mending gutters, eve troughs, elbows, and conductor pipes. To mend a bad leak in a tin trough or roof, clean the surface where the leak occurs, apply a thin coat of liquid cement, lay a piece of cotton cloth over the cement, then give it a second cement coat. There will be no more trouble there for years to come.

KrackerJack Roof Cement comes in cans and barrels, from one pound to 800 pounds in size. You can get any amount you want and the price is right.

## Qualities of KrackerJack Cement

- Tough—Elastic—rubber-like.
- Will not melt and run in hot weather.
- Will not crack and loosen in cold weather.
- Stays elastic and rubber-like for an indefinite period.
- Easy to handle—no special skill required to use.
- Has a hundred uses about the home or farm.
- You are the judge as to whether it does everything we claim for it. If it doesn't you can get your money back.

A crack in a silo stuffed with plastic KrackerJack Cement is permanently repaired. It is no trouble at all to apply. Keep some around. It will save you trouble.

## Pulleys, Shafting and Belting

**Split Wood Pulleys**

### The Myers Electric House Pump

PATENTED

Motor Driven, Automatically Controlled,  
Economical, Efficient

The Myers Electric House Pump can be operated by any electric current or from the Farm Lighting and Power Systems. The motor equipment is 1-6 H.P. Operation is automatically controlled by the use of the Automatic Pressure Controller. This appeals to users generally as it saves electricity, wear and tear on the pump itself, and saves time and labor in starting and stopping when water or pressure becomes low.

Self-Oiling—All working parts are automatically lubricated by oil splash from the crank case except the idler pulley which has a self-lubricating bushing—this eliminates frequent usage of a dirty oil can.

#### Price List

No. 600AT—Myers Electric House Pump, with Vacuum Chamber, Relief Valve, Air Valve, Pressure Controller, Endless Belt and 1-6 H.P., 110 Volt, 60 Cycle, Single Phase A.C. Motor or 110 Volt D.C., or 32 Volt D.C. Motor, with 40 gallon Galvanized Tank, Water Gauge, Pressure Gauge and Connecting Fittings, Price..... \$ 135.00

Specify current used. If Alternating Current, give phase, cycle and voltage. If Direct Current, give voltage. If cycle and voltage are other than specified above on Motors, there will be an extra charge.

When electricity is not available, refer to page 26 for description and price of hand equipments.

# The KRACKERJACK Oil Stoves

This entire line represents the very best in modern oil stove construction. These stoves are relatively light but indefinitely strong and durable. All parts are carefully made and accurately fitted. No expense is spared in making these stoves the best of their kind.

All parts are readily accessible and easily cleaned.

The finish of each stove is perfect and the general effect, handsome. The Tops are smooth and roomy.

The end shelf gives extra space but can be easily removed when filling tank.

The Oil Tank is of glass with special automatic spring valve for filling.

The supply pipe is heavily tinned inside and out to prevent corrosion.

The back shelves are conveniently placed.

Portable ovens can be furnished for oil stoves.

Last, and most important, this whole line of stoves is equipped with the Famous Lorain High Speed Burner. This is the most efficient and dependable burner on the market. Each Burner carries with it the standard Lorain Guarantee and, in itself, guarantees the economy and efficiency of the Krackerjack Oil Stoves. These stoves are particularly recommended for summer use, wherever gas is not available and are preferred by many users as better than a gas range, insofar as they are more economical and, in many respects more dependable.

## Special and Exclusive Features of THE LORAIN HIGH SPEED OIL BURNER

1. Inner Combustion Tube made of "Vesuvius" metal and guaranteed for 10 years.
2. Lorain Long Fibre cotton Wicks—ensure long service and steady flame.
3. Removable Head is quickly detachable and wick immediately accessible.
4. Chimney Raiser is a simple, positive but most convenient action.
5. Positive wick stop, accurately adjusted and requiring no attention.
6. A corrugated, all-brass wick Tube. It will never stick and bind.
7. An extra large, extra strong adjusting wheel.
8. Outside Wick Tube is all-brass, strong and rigid, ample space between wick and outer tube.
9. The Lorain is a Short-Chimney Burner. Gives a Blue Flame of intense heat, directed immediately against the cooking utensil.
10. One gallon of oil will operate a Lorain Burner continuously at full flame for twenty-two hours and will evaporate forty-two pounds of water during this period. Its efficiency cannot be duplicated.

## SMYTH-DESPARD COMPANY

UTICA, NEW YORK

March, 1924.

TO OUR OLD CUSTOMERS AND TO OUR NEW:

We are sure you will welcome our new Household Electric Appliance Department.

Here, as in other lines, we are offering exceptional values. Here, as elsewhere, we have selected and listed only those thoroughly standardized and thoroughly tested appliances that we know will please you.

To all of you whose homes are electrified, these appliances will mean added ease, added comfort and added efficiency at minimum cost.

The Electric Heater will bring added comfort to any room as needed on cool and frosty mornings.

The Electric Fan will temper the heat of July and August days.

The Electric Toasters, Electric Coffee Percolators and the Electric Waffle Irons will guarantee Quality toast, coffee and waffles, always right, always the same; and no trouble, fuss and heat in the preparation.

The Sewing Machine Motor will electrify this task and make of this labor a pastime.

The Electric Iron, instantly ready to use, available for use wherever there is an electric connection, means pleasure and ease in a task otherwise dreaded.

To those accustomed to the old "dirt stirring" method of broom sweeping with the strain on back, arm and temper, the ease and speed and thoroughness of the New KracKerjack Vacuum Cleaner will be a revelation; and so on through the list.

All these appliances are the best of their kind. All are guaranteed. All are priced at a definite cash price which price includes Prepaid Delivery on orders amounting to \$10.00 or more, as per conditions outlined on page one of Catalog.

This is the same system and the same policy, and carries with it the same guarantee that has received general approval and endorsement by our thousands of customers throughout the United States.

Trusting that through economy and service we may continue to merit your patronage, we remain.

Very truly yours,

SMYTH-DESPARD COMPANY,

*Howard G. Low.*

HGLS

Vice President.

# The **KRACKERJACK** Electric Vacuum Cleaner

Thoroughly Guaranteed, Mechanically Correct,  
Sturdy in Construction, Simple in Operation,  
“A Marvel” in Efficiency

## Special and Exclusive Features

1. The Heart of any Electric Vacuum Cleaner is the Motor. The KrackKerjack has a Horizontal, air-cooled Type Motor, for 105 to 120 volt alternating or direct current. There is nothing better. If properly lubricated, it is practically indestructible.

2. Coupled with the Motor is a marvelously efficient exhaust fan. It's a Wonder. Let these two units do your work for you.

3. The KrackKerjack despite its sturdy, strong construction, is light in weight, i. e., 11½ pounds. Aluminum, the lightest of all metals, is used throughout, except for the working parts.

4. The Pistol-grip Handle, designed for ease, is fitted with an Electric Switch. A quarter turn of the Knob starts the Motor, another turn and it stops.

5. At the top of the Bag is a simple slide-on clamp. This clamps tightly but slides on or off, with utmost ease.

**All Attachments FREE**

**Sold on our 10 days  
Trial Plan**

**Price \$33.30**

## Special and Exclusive Features

6. The Sleeve Bag connection at base is removed or attached by a quarter turn on the bayonet lock.

7. An adjusting screw on the front caster shaft lowers or elevates the suction nozzle at will of the operator.

8. A 20-foot Flexible Covered Cord gives altogether adequate radius. In this connection, note the guides on handle are conveniently arranged for carrying cord when not in use.

9. The cleaning nozzle of the KrackKerjack Vacuum Cleaner is 13 in. wide and yet, so designed as to reach the most ungetatable corners.

10. The Suction Nozzle is fitted with a strong bristle Brush of the Pressure type, i. e., is pressed down against rug or carpet by a strong adjustable spring. This Brush will pick off surface lint and threads and ravelings and, at the same time, separate the nap of loosely woven rugs and fabrics, allowing the air suction to remove imbedded dirt and grit.

**Delivered anywhere in the  
U. S. A. East of the  
Mississippi River  
CHARGES PREPAID**

### OUR 10 DAYS TRIAL PLAN

We will deliver this KrackKerjack Electric Vacuum Cleaner anywhere in the United States, east of the Mississippi River, on receipt of \$33.30. A slight additional charge will be made for transportation to more distant points.

There is no extra charge for attachments. These are FREE and are included in the above price.

We thoroughly guarantee the whole equipment, as we do all Mechanical and Sanitary Equipment and Electrical Appliances sold. But beyond this, we hereby agree that if after a 10 days' trial of the KrackKerjack Vacuum Cleaner in your home, you yourself are not thoroughly satisfied with your purchase, you may return the same to us and we will refund your money cheerfully. Could anything be fairer?

At prices quoted, we can not afford to come to you and demonstrate the KrackKerjack Cleaner. Demonstrate it for yourself in your own home and sell yourself.

**SEND FOR SPECIAL FREE CATALOG**

### Electric Toaster

of attractive design. Bright nickel finish. Noted for its low current consumption. Toasts quickly and to an even brown. Furnished complete with six-foot cord and two-piece attachment plug. Suitable for use on voltages from 105 to 120, either Direct or Alternating Current. A moderate priced appliance of large value.

Price..... \$ 2.80

### Electric Toaster

Economical in current consumption. Toasts to a crisp golden brown. Turns toast by revolving top turning knobs. Finished in bright nickel plate, highly polished with ebony finished handles. An appliance that will lend appearance to the finest dining table. Comes complete ready to use with six-foot cord and two-piece attachment plug. Operates on voltages from 105 to 120, either Alternating or Direct current. With an electric Percolator and an electric Toaster, half the breakfast problem is quickly, easily and pleasantly solved.

Price..... \$ 4.12

### 4 Cup Percolator

The right size for the average family. Coffee made right at the table, always clear, always hot, always a success. A few minutes after current is turned on, the coffee is ready to serve and "such coffee." This Percolator is constructed of solid aluminum, bright finished. It is economical in current consumption. Complete with cord and two-piece attachment plug. Operates on 105 to 120 Volts, either Alternating or Direct Current.

Price..... \$ 3.76

### 9 Cup Percolator

Crystal clear coffee made right at the table, in this attractively finished aluminum percolator, assures you of coffee made just right. "No more muddy coffee." Low current consumption, with long life heating element. Furnished complete with cord and two-piece attachment plug for 105 to 120 Volt current, either Alternating or Direct.

Price..... \$ 4.32

### Senior Waffle Iron

This Waffle Iron is made of Nickel Plated Copper, highly polished, with Black Ebonized Handle. The Waffle Plates are cast aluminum. It is a full sized iron, cooking waffle seven and three-eighths inches in diameter. It is strong, thoroughly well constructed, highly polished—a handsome addition to any dining table. The heating elements contained in both top and bottom plates are most efficient. It is a "high-speed," time-saving appliance. No better waffles can be baked than this will bake—baked and served—crisp, brown and hot—right on the table. This iron can be used on any Alternating or Direct Current of 105 to 120 Volts. Complete with cord and two-piece attachment plug.

Price..... \$ 9.53

### Junior Waffle Iron

This is a moderate sized, moderate priced but extremely efficient Waffle Iron. It is made of Solid Aluminum, highly polished. Black Ebonized Handle. The Heating element in both top and bottom plates gives a quick even heat. After iron is once thoroughly heated, it will bake crisp brown waffles in less than three minutes for each waffle. Actual size of waffle is six and one-quarter inches. Complete with cord and two-piece attachment plug and tested Waffle Recipe. Operates on 105 to 120 Volts, Alternating or Direct Current.

Price..... \$ 6.75

### Electric Grill Stove

This Electric Grill represents the modern development of a complete table stove. Bakes, broils, fries, toasts, boils and grills with real satisfaction. It has a three-heat switch, giving low, medium or high degree of heat. Finished in full nickel plate. Ebonized handles. It will operate on either Direct or Alternating Current, 105 to 120 Volts. Complete with cord and two-piece attachment plug.

Price..... \$ 10.94

### Electric Stove

This exceptionally low priced grill, with its powerful heating element, quickly toasts, broils, fries and grills in a few minutes. Constructed of steel, heavily nickel-plated, with asbestos bottom to protect table. Furnished complete with cord and two-piece attachment plug to operate on 105 to 120 volt current, either Alternating or Direct.

Price..... \$ .90

The  
**KRACKERJACK**  
Junior Electric Iron

It is a full size, full weight six-pound iron.  
It is heavily nickel plated with Black Ebonized Handle.

It has a tip-up rest attached to back of iron.  
It heats quickly and holds its heat evenly.

It is a thoroughly reliable iron and represents high value at a moderate price.

It is adapted to operate on 105 to 120 volts, Alternating or Direct Current, or can be furnished for 32 Volt. Specify which voltage iron is desired.

Complete with cord and two-piece attachment plug.

Price..... \$ 3.20

**Travellers Flat Iron**

To those who must travel, or be away from home, this is the ideal iron, weighs three and one-half pounds, just the right weight for ironing fine laces, collars and lingerie. Packed in a substantial box of the right height for packing in suit case or bag. Back rest eliminates necessity of carrying extra stand. Furnished complete with cord and two way attachment plug. Operates on 105 to 120 volts, Alternating or Direct Current.

Price..... \$ 3.02

The  
**KRACKERJACK**  
Electric Flat Iron

A High Grade, Full Sized Iron, complete with Light Portable Rest. This electric iron is essentially a Quality Product. It is a standard six-pound iron, full size, Heavily Nickel Plated with Ebonized Handle, evenly balanced, handsomely finished. The handle fits the hand and the perfect balance insures ease in operation. The Heating element operates quickly and distributes the heat evenly. The iron maintains the proper heat for ideal ironing. The Light Portable Rest will be found a great convenience. The KrackerJack Iron is a thoroughly reliable, efficient and durable appliance. There is none better. It will quickly pay for itself in service. It is a great timesaver and a step-saver also. Why tie yourself to a hot stove when ironing? This Iron can be used on 105 to 120 Volt current, either Alternating or Direct, or can be furnished for 32 Volt current. Specify which voltage iron is desired.

Complete with Portable Rest, Cord and two-piece attachment plug.

Price..... \$ 4.20

**Sewing Machine Motor**

This efficient Motor will electrify your task and make of it a pastime. It can readily be attached to any kind of a sewing machine. A slight pressure of the foot controls the speed, the motor does the work. No more "treadmilling." It is a Universal Motor. Can be used with either Alternating or Direct Current, 105 to 120 volts. Complete with foot control, cord and two-piece attachment plug.

Price..... \$ 10.80

### Electric Heating Pad

Solid Comfort at Minimum Expense. Throw away leaky hot water bottles. Enjoy the comfort of a soft eider-down covered Electric Pad, always ready for service, holds heat as long as connected, special heat controlling switch, three temperatures available, i. e.: low, medium or high. Pad is light, soft and flexible. Can be used on any electric current, alternating or direct, 105 to 120 volts. Complete with cord and two-piece attachment plug.

Price..... \$ 6.78

An Electric Heater will not replace the furnace in zero weather but, as a portable heating accessory, it will bring comfort to any household. It will be particularly appreciated on the cool and frosty mornings of fall and spring when furnace is out of service. With this heater, portable Heat is available at any time for Breakfast Room, for Dressing Room or for Bathroom, ready for instant use where and when and as needed. It stands on floor or can be hung on wall. It heats quickly and throws out powerful heat. A sure cure for "Goose Flesh." It has a solid copper parabolic reflector. It is equipped with handle for carrying. Operates on voltages from 105 to 120, either alternating or direct current. Complete with seven-foot cord and two-piece attachment plug.

Price..... \$ 4.32

### 12 Inch Universal Oscillating Fan

This is an extra heavy duty Fan. A Powerful and most efficient appliance, specially designed for large rooms, offices, hotels, etc. It cannot be recommended too highly. It is designed and constructed for long and continuous service. It is controlled by special regulating switch which controls the oscillating device as well as the three speeds. Operates on 105 to 120 volt alternating current. Complete with cord and two-piece attachment plug.

Price..... \$ 26.49

### 8 Inch Universal Fan

A sturdy, well-made, high grade fan for home or office use. Throws a powerful air current, runs noiselessly, is economical in Electric Consumption. Regulating switch has three speeds. Whole construction is of the best, Phosphor Bronze Bearings, special spring oilers, an exceptionally efficient motor. High value, moderate price. Will operate on Alternating or Direct Current, 105 to 120 volts. Do not wait for the sweltering heat. Buy before you need it and be ready when the hot days come. Complete with cord and attachment plug.

Price..... \$ 7.69

### Curling Iron

Priced exceptionally low for dependable quality. Curling rod  $\frac{3}{8}$  in. diameter, with detachable shield. Nickel plated finish with ebonized handle. Furnished complete with six-foot cord and two-piece attachment plug. For 105 to 120 volt, Alternating or Direct current.

Price..... \$ .88

### Curling Iron

Embodying the latest developments in a combination curling and waving iron. Curling rod  $\frac{3}{8}$ " in diameter, heavily nickel plated, ebonized finish handle, detachable shield, detachable cord plug at handle. Complete with six-foot cord and two-piece attachment plug. For 105 to 120 volt, Alternating or Direct Current.

Price..... \$ 2.29

### Vibrator

The correct size for home or professional use. Perfectly balanced, light weight and noiseless. Has three-speed control. Handsomely finished in bright nickel and black. Furnished complete with six applicators, eight-foot cord and two-piece attachment plug, all packed in Leatherette Carrying Case with treatment book and colored chart. For use on 105 to 120 volt, Alternating or Direct current.

Price..... \$ 12.54

### Violet Ray

An exceptionally high grade Violet Ray Machine. The correct size for home, barbers, physicians, and beauty parlor use. Furnished complete including the surface, comb, throat, nasal and metal electrodes. Five in all. Packed in an attractive carrying case. For use on 105 to 120 volt current, either Alternating or Direct. Complete with cord and two-piece attachment plug.

Price..... \$ 20.63

### Electric Hair Dryer

A necessity to the well groomed woman. Steady volume of air, the temperature of which can be varied to suit. Switch conveniently located in handle. Bright finish aluminum. Complete with cord and two-piece attachment plug, all packed in an attractive carrying case. Operates on voltages from 105 to 120 volts, either Alternating or Direct current. The possession of this Dryer insures shampoo comfort, convenience and time saving.

Price..... \$ 10.32

### Clamp Lamp

Light where you need it, is furnished by this handy clamp lamp. Clamp is lined with heavy green felt and will clamp rigidly on a sheet of paper or a four inch post, or can be hung from base or stand on base without tipping. Adjustable shade directs light where wanted. Finished in brushed brass. Furnished complete with six-foot cord and two-piece attachment plug. Lamp bulb not included. Operates on any voltage, Alternating or Direct current.

Price..... \$ 1.75

### "The Ideal"

A quality flashlight, throughout, though priced extremely low. Its powerful bulls-eye lens throws an extra strong light. Should be in every home and a part of every motorist's or camper's equipment. Case is of brass heavily nickel plated or can be furnished in black fibre case. Size  $1\frac{1}{2}" \times 6\frac{1}{2}"$ , the handy pocket size.

# SUGGESTIONS

## PUMPS, PIPE, ETC.

1. In planning water installations, always figure with an eye to the future. The initial cost of the next size larger is relatively small. The replacement cost should your specifications prove inadequate, is high.
2. Doubling diameter of pipe increases carrying capacity four times.
3. All pipe lines should be as straight as possible. Bends and sharp turns increase friction and diminish capacity.
4. If valves are used on water lines, use gate valves, not globe valves. Gate valves afford a full straightaway course.
5. All pumps should be placed as near source of supply as possible.
6. While theoretically a suction pump will lift water 33.9 ft. at sea level, in practice, it is not safe to count on a lift of more than 20 to 22 feet.
7. A horizontal line is practical up to 1000 feet, providing you provide for just enough gradual slope from pump to supply, to drain the pipe.
8. On long suction lines the pump must be driven at slower speed and should have a vacuum chamber.
9. A Foot Valve is required on all long suction lines. Strainers should also be used unless water is absolutely free from foreign substances.
10. Hot water cannot be lifted by a suction pump but must flow to it.
11. If it is necessary to place pump more than 22 feet above supply level, consult us. It will, in such case, probably be necessary to install a Deep Well system and all details are required for intelligent quotation.
12. The following table gives the average quantity of water per day required for the different services your water system should furnish:

Domestic requirements (Bath, Kitchen and Laundry)	per person	25 gal.
Cows	per cow	12 gal.
Horses	per horse	12 gal.
Hogs	per hog	2 gal.
Sheep	per sheep	2 gal.

(Capacity of round cisterns in gallons).		DIAMETER IN FEET

## BELTING AND PULLEYS

A. To determine the length of a belt, add the diameter of the two pulleys, multiply this sum by 3 1-7 and divide the product by two. Add to this result, twice the distance between pulley centers and the result will be the required length.

B. To find the size of the Driving Pulley, multiply the diameter of the driven by the number of its revolutions and divide the product by the number of revolutions of the driver. The result will be the diameter of the driver.

C. To find the size of the Driven Pulley, multiply the diameter of the Driver by the number of its revolutions and divide the product by the number of the revolutions of the driven. The result will be the diameter of the driven pulley.

D. To find the speed of the Driven Pulley, multiply the diameter of the Driver by the number of its revolutions and divide by the diameter of the driver. The quotient will be the number of revolutions of the driven pulley.

## PUMPS, PIPE, ETC.

1. In planning water installations, always figure with an eye to the future. The initial cost of the next size larger is relatively small. The replacement cost should your specifications prove inadequate, is high.
2. Doubling diameter of pipe increases carrying capacity four times.
3. All pipe lines should be as straight as possible. Bends and sharp turns increase friction and diminish capacity.
4. If valves are used on water lines, use gate valves, not globe valves. Gate valves afford a full straightaway course.
5. All pumps should be placed as near source of supply as possible.
6. While **theoretically** a suction pump will lift water 33.9 ft. at sea level, in practice, it is not safe to count on a lift of more than 20 to 22 feet.
7. A horizontal line is practical up to 1000 feet, providing you provide for just enough gradual slope from pump to supply, to drain the pipe.
8. On long suction lines the pump must be driven at slower speed and should have a vacuum chamber.
9. A Foot Valve is required on all long suction lines. Strainers should also be used unless water is absolutely free from foreign substances.
10. Hot water cannot be lifted by a suction pump but must flow to it.
11. If it is necessary to place pump more than 22 feet above supply level, consult us. It will, in such case, probably be necessary to install a Deep Well system and all details are required for intelligent quotation.
12. The following table gives the average quantity of water per day required for the different services your water system should furnish:

Domestic requirements (Bath, Kitchen and Laundry)	per person	25 gal.
Cows	per cow	12 gal.
Horses	per horse	12 gal.
Hogs	per hog	2 gal.
Sheep	per sheep	2 gal.
